TABLE OF CONTENTS, Volume 58, 1977

COLE, C. VERNON, GEORGE S. INNIS, AND J. W. B. STEWART. Simulation of phosphorus cycling in semiarid grasslands 1–15

STARK, NELLIE M. Fire and nutrient cycling in a Douglas-fir/larch forest .. 16–30

RANDOLPH, POLLEY ANN, J. C. RANDOLPH, KEVIN MATTINGLY, AND MARGARET MEAD FOSTER. Energy costs of reproduction in the cotton rat, *Sigmodon hispidus* 31–45

EGGERS, DOUGLAS M. The nature of prey selection by planktivorous fish. 46–59

SCHAFFER, WILLIAM M., AND MICHAEL L. ROSENZWEIG. Selection for optimal life histories. II. Multiple equilibria and the evolution of alternate reproductive strategies 60–72

FOSTER, MERCEDES S. Ecological and nutritional effects of food scarcity on a tropical frugivorous bird and its fruit source 73–85

BERTNESS, MARK D. Behavorial and ecological aspects of shore-level size gradients in *Thais lamellosa* and *Thais emarginata* 86–97

BEISWENGER, RONALD E. Diel patterns of aggregative behavior in tadpoles of *Bufo americanus*, in relation to light and temperature 98–108

BODDINGTON, M. J., AND D. F. METTRICK. A laboratory study of the population dynamics and productivity of *Dugesia polychroa* (Turbellaria: Tricladia) 109–118

HUEY, RAYMOND B., AND ERIC R. PIANKA. Patterns of niche overlap *versus* narrowly sympatric Kalahari lizards (Scincidae: *Mabuya*) 119–128

JUHREN, M. C., AND KENNETH R. MONTGOMERY. Long-term responses of *Cistus* and certain other introduced shrubs on disturbed wildland sites in southern California 129–138

LORIMER, CRAIG G. The presettlement forest and natural disturbance cycle of northeastern Maine 139–148

LEWIS, WILLIAM M., JR. Net growth rate through time as an indicator of ecological similarity among phytoplankton species 149–157

DEBENEDICTIS, PAUL A. The meaning and measurement of frequency-dependent competition 158–166

STRONG, DONALD R., JR., EARL D. MCCOY, AND JORGE R. REY. Time and the number of herbivore species: The pests of sugarcane 167–175

FRANZ, ELDON H., AND F. A. BAZZAZ. Simulation of vegetation response to modified hydrologic regimes: A probabilistic model based on niche differentiation in a floodplain forest 176–183

KLEIN, DONALD A. Seasonal carbon flow and decomposer parameter relationships in a semiarid grassland soil 184–190

MACKAY, ROSEMARY J. Behavior of *Pycnopsyche* (Trichoptera: Limnephilidae) on mineral substrates in laboratory streams 191–195

WILBUR, HENRY M. Density-dependent aspects of growth and metamorphosis in *Bufo americanus* 196–200

WICKLOW, DONALD T. Germination response in *Emmenanthe penduliflora* (Hydrophyllaceae) 201–205

WILBUR, HENRY M. Interactions of food level and population density in *Rana sylvatica* 206–209

POOLE, ROBERT W. Periodic, pseudoperiodic, and chaotic population fluctuations 210–213

RODELL, CHARLES F. A grasshopper model for a grassland ecosystem 227–245

HINDS, DAVID S. Acclimatization of thermoregulation in desert-inhabiting jackrabbits (*Lepus alleni* and *Lepus californicus*) 246–264

SWEENEY, BERNARD W., AND JUAN A. SCHNACK. Egg development, growth, and metabolism of *Sigara alternata* (Say) (Hemiptera:Corixidae) in fluctuating thermal environments 265–277

GRIGG, RICHARD W. Population dynamics of two gorgonian corals 278–290

MCKAYE, KENNETH R. Competition for breeding sites between the cichlid fishes of Lake Jiloá, Nicaragua 291–302

KERFOOT, W. CHARLES. Competition in cladoceran communities: The cost of evolving defenses against copepod predation 303–313
WHITNEY, PAUL. Seasonal maintenance and net production of two sympatric species of subarctic microtine rodents 314–325
VITT, LAURIE J., JUSTIN D. CONGDON, AND NANCY A. DICKSON. Adaptive strategies and energetics of tail autotomy in lizards 326–337
TILMAN, DAVID. Resource competition between planktonic algae: An experimental and theoretical approach 338–348
STAMPS, J. A. The relationship between resource competition, risk, and aggression in a tropical territorial lizard 349–358
MICHENER, GAIL R., AND DANIEL R. MICHENER. Population structure and dispersal in Richardson's ground squirrels 359–368
CHAO, LIN, BRUCE LEVIN, AND FRANK M. STEWART. A complex community in a simple habitat: An experimental study with bacteria and phage . 369–378
REUSS, J. O., AND G. S. INNIS. A grassland nitrogen flow simulation model 379–388
ERWIN, R. MICHAEL. Foraging and breeding adaptations to different food regimes in three seabirds: The Common Tern, *Sterna hirundo*, Royal Tern, *Sterna maxima*, and Black Skimmer, *Rynchops niger* 389–397
TOMKINS, D. J., AND W. F. GRANT. Effects of herbicides on species diversity of two plant communities 398–406
BOHM, BRUCE C., AND NEIL F. HADLEY. Tritium-determined water flux in the free-roaming desert tenebrionid beetle, *Eleodes armata* 407–414
GAUDET, JOHN J. Uptake, accumulation, and loss of nutrients by papyrus in tropical swamps 415–422
MEREDITH, DON H. Interspecific agonism in two parapatric species of chipmunks (*Eutamias*) 423–430
EDWARDS, N. T., AND W. F. HARRIS. Carbon cycling in a mixed deciduous forest floor 431–437
SCHOENHERR, ALLAN A. Density-dependent and density-independent regulation of reproduction in the Gila topminnow, *Poeciliopsis occidentalis* (Baird and Girard) 438–444
BROWN, JAMES H., AND ASTRID KODRIC-BROWN. Turnover rates in insular biogeography: Effects of immigration on extinction 445–449
SCHIMPF, DAVID J. Seed weight of *Amaranthus retroflexus* in relation to moisture and length of growing season 450–453
REICHMAN, O. J. Optimization of diets through food preferences by heteromyid rodents 454–457
HUNT, H. WILLIAM. A simulation model for decomposition in grasslands . 469–484
PEET, ROBERT K., AND ORIE L. LOUCKS. A gradient analysis of southern Wisconsin forests 485–499
PAYNE, ROBERT B. Clutch size, egg size, and the consequences of single vs. multiple parasitism in parasitic finches 500–513
ONUF, CHRISTOPHER P., JOHN M. TEAL, AND IVAN VALIELA. Interactions of nutrients, plant growth, and herbivory in a mangrove ecosystem 514–526
EICKWORT, KATHLEEN R. Population dynamics of a relatively rare species of milkweed beetle (*Labidomera*) 527–538
HOWE, HENRY F. Bird activity and seed dispersal of a tropical wet-forest tree 539–550
FASHAM, M. J. R. A comparison of nonmetric multidimensional scaling, principle components and reciprocal averaging for the ordination of simulated coenoclines, and coenoplanes 551–561
OLIVER, CHADWICK DEARING, AND EARL P. STEPHENS. Reconstruction of a mixed-species forest in central New England 562–572
STRONG, DONALD R., JR. Insect species richness: Hispine beetles of *Heliconia latispatha* 573–582
WALDBAUER, G. P., J. G. STERNBURG, AND C. T. MAIER. Phenological relationships of wasps, bumblebees, their mimics, and insectivorous birds in an Illinois sand area 583–591

DAVIDSON, ERIC D., AND MICHAEL G. BARBOUR. Germination, establishment, and demography of coastal bush lupine (*Lupinus arboreus*) at Bodega Head, California 592–600
BRINSON, MARK M. Decomposition and nutrient exchange of litter in an alluvial swamp forest 601–609
SHIOZAWA, DENNIS K., AND JAMES R. BARNES. The microdistribution and population trends of larval *Tanypus stellatus* Coquillett and *Chironomus frommeri* Atchley and Martin (Diptera: Chironomidae) in Utah Lake, Utah 610–618
FLEMING, THEODORE H., E. RAYMOND HEITHAUS, AND WILLIAM B. SAWYER. An experimental analysis of the food location behavior of frugivorous bats 619–627
BALLINGER, ROYCE, E. Reproductive strategies: Food availability as a source of proximal variation in a lizard 628–635
REICHMAN, O. J., AND DAVID OBERSTEIN. Selection of seed distribution types by *Dipodomys merriami* and *Perognathus amplus* 636–643
MITCHELL, RODGER. Bruchid beetles and seed packaging by Palo Verde .. 644–651
CAMPBELL, GAYLON S., AND GRANT A. HARRIS. Water relations and water use patterns for *Artemisia tridentata* Nutt. in wet and dry years 652–659
HARWELL, MARK A., WENDELL P. CROPPER, JR., AND HARVEY L. RAGSDALE. Nutrient cycling and stability: A reevaluation 660–666
BRADFORD, DAVID F., AND CHRISTOPHER C. SMITH. Seed predation and seed number in *Scheelea* palm fruits 667–673
GEORGE, MILON F., SUNG GAK HONG, AND MICHAEL J. BURKE. Cold hardiness and deep supercooling of hardwoods: Its occurrence in provenance collections of red oak, yellow birch, black walnut, and black cherry 674–680
BULLOCK, STEPHEN H., AND RICHARD B. PRIMACK. Comparative experimental study of seed dispersal on animals 681–686
GREEN, KATHLEEN, AND ROBERT WRIGHT. Field response of photosynthesis to CO_2 enhancement in ponderosa pine 687–692
SLOCOMB, JOHN, BARBARA STAUFFER, AND KENNETH L. DICKSON. On fitting the truncated lognormal distribution to species-abundance data using maximum likelihood estimation 693–696
BENNETT, ALBERT F., AND KENNETH A. NAGY. Energy expenditure in free-ranging lizards 697–700

Reviewers of Manuscripts 1407–1410
INDEX FOR VOLUME 58 1411–1420

Instructions to Authors

The pages of ECOLOGY and ECOLOGICAL MONOGRAPHS are open to research papers dealing with all aspects of ecology and to discussions and essays that develop ecological theory. All papers must be in English.

ECOLOGY considers papers up to 20 printed pages long, including illustrations. ECOLOGICAL MONOGRAPHS handles papers which initially are estimated as longer than 20 pages. Three pages of typescript equal approximately one printed page. Illustrations and tabular material together may constitute up to 20% of the total printed pages. Extensive tabular data too raw or costly to publish can be made available to readers through microfilm or microfiche services.

Manuscripts should be submitted to the Managing Editor. Authors will be notified of receipt of the manuscript. A designated subject-matter editor is responsible for review and acceptance or rejection of the manuscript. Technical correspondence concerning the manuscript may be directed to that editor. Turnaround time for manuscripts is usually a minimum of 90 to 120 days after receipt by the Managing Editor's Office. Delays in obtaining reviews may prolong this period. If a manuscript is returned for revision, the author should submit his revised manuscript to the subject-matter editor within 6 months. Manuscripts undergoing revision for longer than 6 months may (at the discretion of the subject-matter editor) be considered as new manuscripts and submitted again to review. The author should provide a forwarding address if he moves from the return address shown on his manuscript. American authors *must* specify zip code designations. *The CBE Style Manual, Third Edition*, available from the American Institute of Biological Sciences for $6.00, is recommended for details of style. **Manuscripts that do not conform in most respects to the instructions below will be returned to authors for correction before consideration.** Fewer than a third of manuscripts received can be printed.

PREPARATION OF MANUSCRIPT

Write with precision, clarity, and economy; use the active voice and first person whenever appropriate. Every sentence should convey the exact truth as simply as possible.

Type all material (text, tables, quotations, footnotes, literature cited, etc.) **double spaced,** on only one side of standard sized paper approximately 21 by 28 cm. Leave ample margins. Do not use very thin paper, even though overseas mailing is required.

Send the original manuscript **plus at least two copies.** The original and copies must include illustrations. Photocopies are preferable to carbons. Retain at least one complete copy of the manuscript in your files. **DO NOT** submit original India-ink figures due to the risk of loss or damage in the mails.

Titles of articles should be informative and short, usually not more than 10 words. A **running head** not longer than 40 spaces should be provided when the title exceeds this length. Titles with numerical series designations will not be accepted.

Each paper must include an abstract immediately following the title and author's name. Abstracts should record succinctly the essential findings, i.e., they should be informative rather than indicative. Do not include details of methods and results. Tables of contents and terminal summaries are no longer printed. Include, following the abstract, a **list of 6–12 key words** for indexing.

Do not underline any words except scientific names.

Avoid footnotes; most footnote material can be incorporated in the text to the benefit of readers, editors, and printers.

Acknowledgments, if extensive, should be placed under a heading just before the Literature Cited.

Literature Cited must be double spaced. Before submitting the manuscript, check each citation in the text against the Literature Cited to see that they are in agreement. The listing should conform in sequencing and punctuation to that in current issues. Consult the *CBE Style Manual* for details.

Authors are to use the metric system for measurements.

Tables must each be **typed double spaced on separate sheets.** Number tables consecutively and give each a short title. Do not rule tables unless essential to avoid ambiguity. Consult recent issues of the journal for style. Never repeat the same material in figures and tables; when either is equally clear a figure is preferable. Avoid unnecessary material, especially tables and long lists of little interest save to the author; this material will be edited rigorously.

Algebraic symbols will appear in italics in print. Formulae to be set separately from the text should not exceed the width of one column. If longer the editors will break the formula into two or more lines. Authors should write their formulae with this in mind and indicate where each formula may be broken. Subscripts and superscripts should be clarified by marginal notes, and subscripts of subscripts should be avoided. The author can insure the accuracy of his formulae and simplify the job of the editor and printer by grouping formulae and preparing them as a figure.

Text figures generally should not exceed 21 × 30 cm. High contrast photographic copies of line drawings, maps, and graphs are essential. Most illustrations will be reduced to a single-column width: letter meticulously using letters large enough to leave characters at least 1 mm high after reduction. *Typewritten lettering within the body of figures is not acceptable.* On figures to be reproduced at single-column width, the height of the lettering should never be less than 1.5% (nor more than 3%) of the width of the figure. Capital letters take reduction better than lowercase. Photographs should be printed for contrast, on glossy paper, unmounted or mounted on light cardboard.

GALLEY PROOF AND REPRINTS

Correct (*not* revise) both sets of proof identically, retain one, and return one promptly, **with the edited manuscript,** to the Managing Editor. Mail the reprint order form, showing whether reprints are desired, to the Printer as directed.
